

Output:

The screenshot shows the VS Code editor with the file `package_detection.py` open. The code is a Python script that uses OpenCV to capture video from a camera and detect objects using a YOLO model. The script includes comments for FPS, coordinates, font, and color, and uses `cv2.imshow` to display the video frame. The terminal output shows the script being executed twice, both times successfully loading the YOLO model and starting the camera. The first execution shows the program stopped after pressing 'Q'.

```
243     f"FPS: {fps:.1f}",
244     (20, 75),
245     cv2.FONT_HERSHEY_SIMPLEX,
246     0.7,
247     (255, 0, 0),
248     2
249 )
250
251 cv2.imshow(
252     "YOLO Package/Object Detection",
253     frame
254 )
255 if cv2.waitKey(1) & 0xFF == ord("q"):
256     break
257 cap.release()
258 cv2.destroyAllWindows()
259
260 print("Program stopped.")
```

Terminal Output:

```
PS C:\Users\utkar\AppData\Local\Programs\Microsoft VS Code> & C:\Users\utkar\AppData\Local\Programs\Python\Python310\python.exe c:/Use
rs/utkar/Desktop/Package_Detection/package_detection.py
Number of classes: 80
YOLO model loaded successfully.
Camera started.
Press Q to exit.
Program stopped.
